Node.js
React
MongoDB
Test-Driven Development
Agile Software Development
SOLID Principles
Git/GitHub
User Experience
IntelliJ IDE
Atom

Interests

Football, basketball, skiing, gym, traveling

Languages

Spanish	
---------	--

I am an inquisitive, enthusiastic software developer who recently graduated from CodeClan's professional software development course. Throughout the course I developed strong programming skills with a particular focus on web development, as well as soft skills such as collaboration, communication, and creativity. I am looking forward to beginning my career as a software developer, continuing to learn new technologies, and being able to craft user friendly experiences in a high growth company.

Education

May 2018 - Sep 2018	CodeClan Achieved an SQA Level 8 Qualification in Software Development at CodeClan's 16-week intensive course, involving 800+ hours of class time and personal study. The course focused on Object Orientated Programming (Ruby, Java, JavaScript), web development and test-driven development. It involved daily pair programming labs as well as three web application projects.
Sep 2013 - May 2017	Heriot Watt University 1st Class BSc. (Honours) Psychology <ul style="list-style-type: none">Developed a high level understanding of psychological theory, with focus on social psychology, cognitive psychology, developmental psychology, neuroscience, and research methods.Studied various elective modules in marketing and business management.

Projects

Event Finder:	Collaborated with an agile team to design and build a single page JavaScript web app for finding nearby entertainment events. Making use of external APIs and a MongoDB database, users are able to search for and save events based on category, dates, and location and can then view their results on an interactive map.
News Website:	Designed and built a full-stack news website using Java and Spark. Users can view a homepage with all articles, click through to see full stories, view journalists, and share on social media. An editor side also allows the creation, edit, and deletion of articles through a Hibernate database.
Spending Tracker:	Designed and built a full-stack web application using Ruby, Sinatra, and postgresSQL to allow users to track their financial transactions, and break down their spending habits by date, merchant, and tag.

Experience

Jul 2017 - Sep 2017	Driver/Build Team Member <i>Out of Hand</i> Built and maintained structures for Edinburgh Festival advertising, which had over 500,000 visitors in 2017. Working as part of a large team, I drove and delivered materials for over 700 clients.
Jun 2016 - Sep 2016	Customer Assistant <i>Margiotta Food and Wine</i> Assisted and served customers for a local food store. Daily responsibilities also included handling cash, handling deliveries, and pricing and sorting stock.
Jun 2015 - Nov 2015	Bartender <i>Platform 5</i> Worked as part of a large team to run the front of house for a busy bar and restaurant. Responsibilities included serving drinks to customers, handling cash, and controlling stock levels.
